

emagiC CMS (Emagine)

Emagine is a Belgium based ICT company that focuses on the development of a cost-efficient and user-friendly Enterprise Content Management System emagiC CMS.Net. The emagiC CMS.Net framework is one of Europe's fastest growing systems for building Internet, Intranet, Extranet and Portal websites.

Emagine is a Belgium based ICT company, founded in the year 2000, that focuses on the development of a cost-efficient and user-friendly Enterprise Content Management System emagiC CMS.Net. The emagiC CMS.Net framework is one of Europe's fastest growing systems for building and maintaining Internet, Intranet, Extranet and Portal websites.

The emagiC CMS.Net framework helps both large corporations and SME's to increase productivity, to speed time-to-web and to better control the process of website maintenance. By eliminating the technical barriers, the emagiC CMS.Net framework turns content creators into content publishers while preserving the layout and information workflow.

The emagiC CMS.Net framework takes content management far beyond the administration of isolated content items. Separated sitemaps per site and language form the backbone for the overall structure of the content and application nodes. The site management features result in unique advantages such as real-time link verification and integrated extranet security. The portal management features give site editors complete freedom to compose their pages. Each page is a collection of content items that can be added dynamically through the user-friendly administration interface.

Emagine believes that you should only pay for what you use. Given the modular architecture, the emagiC CMS.Net framework is equipped to provide a right-sized solution for every project, ranging from small brochureware websites to large e-commerce solutions. Large Corporations choose emagiC CMS.Net for its rich feature set and scalability, while the ability to grow attracts many expanding companies.

The emagiC CMS.Net framework relies on the MS .NET Framework v2.0. It provides an open and scalable architecture and can easily be extended with custom modules and integrated with existing legacy systems. Hence, emagiC CMS.Net is a solid platform for Enterprise Content Management.

Emagine has gained the confidence of many partners who use the emagiC CMS.Net framework to deliver quality solutions and to ensure successful projects. Currently Emagine has partners and resellers in Europe, America, Africa and Asia.
